

## Connecting People

Full utilisation of your hardware creates a need for an appropriate network solution, linking your user systems. For appropriate information management you need a system that precisely meets your business needs. The size, importance and complexities of business networks demand time and expertise unavailable to most businesses. Network design, integration, implementation and project management are all vital business processes, and the internet now provides an invaluable tool for many businesses.

*Holding your systems together and allowing full exploration of information technology.*

## Efficient Networking systems

We will analyse your business processes and identify critical business needs, prioritising capabilities and investment requirements. We will fully research the ideal solution for your business, presenting efficient and appropriate technologies that compliment your network solution. We will then produce a thorough and comprehensive design proposal that we hope will exceed your expectations and requirements.

## Capabilities

Our intimate knowledge of network solutions allows us to provide networking solutions further than initial design. We provide comprehensive reviews, remediation and management of network security and disaster recovery. This provides complete reassurance that your systems are safe from attack and disaster recovery. We specialise in network relocation and re-configuration, providing experience of reassembling phone systems, work stations and servers, and migrating numbers. Finally, internet connectivity is now a tenant expectation as part of their office space. In order to add value and provide comprehensive office space, we provide landlords with appropriate solutions and flexible IT infrastructure.

## Technologies

We have experience with a varying range of technologies, allowing us to use a method of best fit, which provides precise solutions for your requirements. This also enables us to be completely innovative when designing appropriate and efficient networking systems.

We can introduce you to remote working and show you how it can liberate your time, lower overheads and increase productivity. Using low cost internet facilities such as VPN, we can provide connection solutions that offer speed and complete security. Mission critical systems can be more effectively dealt with by an application service provider, and we can add flexibility to your office with our experience in wireless technologies.

## Reliable Internet connections

The internet is an invaluable tool for many businesses. In order for you to fully utilise this vital source of information and fully connect you to your customers and suppliers, we can supply you with an exchange server solution that fully meets your internet and email requirements. We offer fast, reliable internet connections that allow you full access and connectivity capability. We also offer complete internet security and can effectively configure and manage firewall protection.

## Implementation

Whether consulting or implementing our own network design, you will be assigned an experienced project manager to fully see through all phases of the project. Beginning at consultation stage, all the way through to implementation and integration, our engineer will guide and advise you completely during the network build. All network installations are designed with the aid of user acceptance testing. We do not prioritise technology over people and focus on providing systems that fully meet your technological requirements, whilst ensuring user-friendly service. Finally, we ensure that your new system enjoys full and comprehensive implementation by providing a floor walking service. Half user training, half trouble shooting, this service provides your team with our expertise and guidance ensuring they develop confidence and skills in the new system. We have complete confidence that from design to implementation of your new network solution we will provide a comprehensive, efficient system that fully meets your requirements and integrates fully with existing hardware and users.

**"Wolf Consultancy ensured that our networks remained fast, reliable and secure."**
