

## Improve your business

The frantic pace of technical advancement, forces companies to keep abreast of technological innovations if they are to remain both efficient and competitive. To be at the forefront of their industries, businesses must invest in, utilise and support new technology that continually provide more efficient, cost effective business solutions.

In order to successfully manage such technology and make informed decisions, you need to be able to call upon an intimate knowledge of IT infrastructure. The technical expertise required for this has long been beyond the reach of many businesses. Wolf Consultancy was established to remedy this situation. Providing a full range of consultancy services, Wolf Consultancy offers you the talents of diverse, experienced and committed engineers.

*Providing you with all the benefits that an IT department provides a large corporation, and more!*

## Strategic Direction

We believe that an IT strategy must exist as part of an overall business strategy. The strategic use of technology can be instrumental in improving and complimenting business processes, and is the key to controlling costs and fully utilising your IT systems.

After exploring your business processes and business needs, Wolf Consultancy can then fully assess your company's aims and objectives and aid in developing an effective IT strategy that not only underlines these goals, but achieves them.

## Systems & Implementation

To fully compliment an IT strategy, effective systems must be put into place. Choosing and implementing the correct systems so as to gain a real business benefit can prove risky without proper technical expertise available.

Wolf Consultancy works closely with you so as to define your requirements and map these to an appropriate technology and system. Wolf then, fully work through the implementation stage ensuring an efficient transition to your new platform.

We have extensive implementation experience with a variety of platforms and will provide you with systems that will bring maximum business gain with maximum efficiency.

## Bespoke Application Development

Many companies face business IT challenges for which there appears to be no solution. There may be no software available that provides the information management required to improve your business processes. Similarly, the software that you currently use may not be fully meeting your requirements.

Wolf Consultancy can define your requirements and tailor a software package that meets your specific objectives. Furthermore, we can explore current software and determine whether suitable for integration with a bespoke package that will fully meet set criteria.

## Data Base Design

Today's businesses need to record every facet of their business processes if they are to remain efficient and make informed decisions. Archiving sales, purchasing and customer details are therefore essential. However, some companies have sub standard methods of compiling and collating such vital information.

Wolf Consultancy can effectively design tailored databases. We can help by designing database layouts that efficiently record and display all relevant data. We can develop input forms, output report layouts and queries and we can link databases together, giving you more control and less duplication of effort.

## Disaster Recovery

Disasters are a regular occurrence in the business life cycle with the term all too often bounded around with flippant meaning. However, an IT disaster can be truly devastating.

Sales and purchasing records, accounts, customer details and archived work are all vital information that requires storing. Imagine if your system crashed and deleted everything. What if there was a fire on site that destroyed your records?

Wolf Consultancy can help by securing your data and installing back up systems. Such contingencies are essential so as to ensure the safe protection of your records. We also provide off site protection in case of fire and destruction.

**When we could find no off the shelf solution, Wolf Consultancy designed an application that was completely tailored around our requirements."**
